Degree (BSc.)	Web Development	Second Class Honours (2nd Division)
BTEC National Diploma	Computer Studies	2 Distinctions 2 Merits
GCSE	6 A-C grade GCSEs including (B) for both English Language and English Literature.	

Employment History

▪ British Broadcasting Corporation (BBC)
Client Side Developer (Full-time)   **June 2007 ~ *Present***

Working in the BBC's central Future Media & Technology division, I was placed on the DNA project. This produces and maintains a solution for providing user generated content throughout the business. I began work on a concept that would replace the current presentation architecture. In early September, I was moved off this project to start work on the new BBC homepage, where I was one of three developers that produced the page and its interaction model.

▪ TH_NK
Web Developer (Full-time)   **March 2007 ~ May 2007**

I began work with a growing web based media company situated in the centre of Newcastle. Working with two other partners, TH_NK were responsible for development of Northern Rock's online banking solution, known as ETS2. The project was large – including a complex XSLT architecture, a mature Javascript behaviour layer and many intertwining CSS files.

▪ Durham Federation
Durham Community Business College & Fyndoune Community College
Web Developer (Full-time)   **July 2006 ~ February 2007**

After finishing University I was offered a position working in two partner comprehensive schools, following on from work that I had done previously within various areas of the DfES. The role involved furthering development of an Intranet and messaging system I had designed and implemented there, which additional bits of web work. I learnt a great deal about all aspects of product development, from conception to design and IA based work as well as actual implementation and maintenance.
